ABSTRACT

What is the impact of technology and to what level the high schools in Gjilan (Kosovo) are prepared in the incorporation of various learning technologies in teaching and learning? These are two essential issues that have resulted in a significant research on the application of different technologies in education and in preparing young people to become leaders and successful in society today which is running by the internet. This paper reports on the outcomes of a survey implemented in high schools, also in this paper is presented the real situation in high schools in Gjilan using questionnaires with students and teachers. How often these technologies are used in teaching and if these schools meet requirements regarding to technology equipment, the condition of the IT cabinets, if the teachers are trained and what is the ability of students to deal with technologies.

Keywords: Technology, survey, teachers, computer.
