

THE OPPORTUNITIES OF TEACHING ASTRONOMY BASED ON MEDIA EDUCATION AT A SECONDARY SCHOOL

Narbaev Azamat Bakhramovich

Basic doctoral candidate of Termez State University

ABSTRACT

This article is about the efficiency of teaching astronomy based on media. Here, opportunities of media education in teaching astronomy are shown in respective ways by comparing them with usual ways of teaching. Teaching the subject of astronomy, which is helpful in improving the imagination of students and in positive influence on learning the subject, is enlightened by some experiments.

Keywords: Secondary school, media education, information technology, the Internet, astronomy, electronic textbook, didactic principals, control groups.
