

IMPROVING THE EDUCATION OF CHILDREN AGED 6-7 YEARS ON THE BASIS OF NATIONAL VALUES

Saidov Jur'at Sodirovich

Teacher of the Department "Preschool Education" of Jizzakh State Pedagogical Institute named after Abdulla Kadiriy

ABSTRACT

At present, pre-school education pursues the goal of shaping the personality of the child into a healthy and mature, at the same time prepared for school. Another of the main goals of preschool education in improving the education of children aged 6-7 years on the basis of national values is the formation of national pride in preschool education institutions educators tried to make bayton in this article.

Keywords: A healthy and harmonious Child, national pride, feeling of national value, togetherness and solidarity, national pride of independence, love for the motherland, selflessness, compassion, eventually, a feeling of respect for parents.

INTRODUCTION, LITEARTURE REVIEW AND DISCUSSION

The field of preschool education is the primary component of the continuous education system, which plays an important role in the upbringing and preparation of a healthy and harmonious child in all respects. Today, the issue of education and training of pre-school educational institutions educators is one of the topical issues of our state and compatriot Shavkat Mirziyoyev. As a result of the analysis in this regard, three major documents in a short time - the decree of the president of the Republic of Uzbekistan "on measures to radically improve the preschool education system"PP-3261, the decree of the president of the Republic of Uzbekistan "on measures to radically improve the management of the pre-school education system"PP-5198. In the program adopted for the purpose of improving this sphere, it was noted that the sphere of preschool education as the primary link of the continuous education system, the role of preschool education institutions in the formation of legal literacy of children in this process, as well as the education system in the Republic and the education of a harmonious generation are the The current period, that is, the growing awareness of "**Ethnic minority**", requires further cultivation and development of national feelings, which are formed in the younger generation – especially in the upbringing of preschool institutions. Preschool educational institutions require the introduction of the humanitarian direction of individual education on the basis of the rich spiritual and spiritual heritage of the people and universal values. It also includes patriotism, formed on the basis of national pride, national value, a sense of solidarity and solidarity. The stronger the love for the mother land, the stronger the pride in it, the stronger the love of the Motherland, the higher the respect, the deeper each person has a deep idea of the history of his homeland, national values, his native language, culture, national traditions, traditions, the fate and prospects of the nation, the stronger and more stable the independence will be.

At present, the issue of spirituality is one of the main directions of strengthening independence, forming the spirituality of a person while confidently going towards independence. A person with a mature culture can only occupy the ideology of independence and go towards the future on the basis of harmony and harmony. National language and national culture, national

consciousness, national self-awareness, national feeling, national pride and pride play an important role in the restoration and development of our spirituality.

The effective work carried out to restore and enrich national values during the period of reforms brought to the agenda the necessity of educating the youth who became the creators of tomorrow on the basis of national gypsy and universal values. High decency is not something that people think of yesterday or today. They were formed during the millennial history of mankind, the experience of several ancestors and descendants of our ancestors. Manners, morality, decency, shame and shame are impregnated with young people with mother's milk, father's sample, ancestors' son¹.

National pride is an expression of belonging to a certain nation and pride in the contribution made by this nation to world culture, as well as a sense of loyalty to the nation to which it belongs, and practical activity on this path. In fact, in the younger generations, preschool educational institutions and the family play an important role in the formation of love for the motherland, national pride. Independence created unlimited opportunities for national pride, love for the motherland, self-sacrifice, compassion, and, ultimately, for the development of a sense of respect for parents. Compassion, the end, the Uzbek character, the meaning of life. "When the term" nation "is understood as an object of value, it corresponds to the level of national identity, such as" Turkic peoples", "slovians", "roman Peoples", which are used in relation to blood sister nations with each other. Preschool education pursues the goal of forming the personality of the child healthy and mature, at the same time prepared for school. Article 11 of the law "on education" of the Republic of Uzbekistan States: "this education is carried out in a family under the age of 6-7 years, in a kindergarten and other educational institutions regardless of the form of property". Another of the main goals of education in preschool institutions is the formation of national pride in the upbringing of preschool institutions.

The goal of breaking the national feeling into the hearts of the educators of pre-school educational institutions: to love and be proud of the hearts of children, to instill a sense of pride. National pride is based on the national values, traditions, native language of our people. Therefore, the current state of the formation of the national feeling in the educators of the preschool institution should be studied.

Education in the process of education is a continuous process, it is not limited to the provision of band - reminders, but also in a preschool educational institution it is taught in two ways: through direct influence of adults, that is, by teaching, by creating an environment in which wise thoughts, sons and works are read and developed, and by independent thinking of the It is desirable to find in the hearts of children a feeling of love and respect for their people, to educate them on national pride, to integrate into them the kindness, hospitality, kindness and humility of the Uzbek people, to formulate knowledge about the independence, anthem, emblem and flag of Uzbekistan.

In order to formulate a national feeling in the upbringing of preschool institutions, the topics of the training should help the child to develop comprehensively, to educate him as a person with high manners and national pride. In the formation of national pride in children of preschool age, it is important to study not only pre-school educational institutions, but also the current

state of the family. Because, the free time of children passes in the circle, mainly at home, in the family. Not taking this into account, it would be a mistake if we do not think more deeply about the duties and duties of the father-mother in the upbringing of the younger generation.

One aspect of the national feeling is loyalty to the Motherland, the nation, the land of elu. There can not be a word about the comeliness of a person who does not love his homeland, looks at the history and fate of his nation. Constant impressionable force in family education the attitude in the family, the family environment, the interaction of family members, the behavior of parents, brothers and others, the cultural and political level, the culture of treatment, the income of the family, the living conditions and other circumstances are the main factors that affect the child's maturity. The more orderly the family, the better the mood, the more intimate the relationship of its members is, the more effective the family upbringing is. Imam ibn Kudoma in his book: "Minhojul-kosidin" mentions a few manners: "if the child reaches adulthood and shows signs of thinking in it, it is necessary to observe it well and study the situation. Because the child's soul is simple and clean, and he is ready to accept any pattern. If one is accustomed to good, he will grow up with good. If he is accustomed to evil, he grows up with evil, and responsibility falls on the neck of his loved ones."

National pride, the formation of a sense of patriotism, is the duty of every parent, educator, public figure in front of the. The words used in the works of Alisher Navoi have been used as the basis of the Uzbek literary language lexicon since the 15 th century, which fully confirms that the Great Creator is an incomparable genius in the history of Uzbek literature, language and culture. The works of Navoi are very rich in their content, they contain words related to different spheres of life, spiritual and spiritual worlds of the Turkic-Uzbek people. One of them is necessary to teach from words belonging to the world of plants².

What kind of person will grow up in the future of the educators of the pre-school educational institution in many ways depends on the Educator of the pre-school educational institution, the closest people: on the culture of mutual treatment of parents, on their relationship. Therefore, it is desirable to carry out national pride, ideological educational work with the parents of the educators of preschool institutions, too.

Therefore, the formation of a sense of self-sacrifice from youth to the fate of the people and the country plays an important role in ideological upbringing. To do this, it is necessary from the first years of the child's life to use the forms characteristic of our national traditions of introducing him to the world of things.
