ABSTRACT

This article is devoted to the regular use of various intelligent technologies, Internet services and social networks in the study or teaching of foreign languages to people from the older age group. Particular attention is paid to such a social network as Facebook, since this intellectual resource is the largest social network in the whole world. This, in turn, suggests that this online platform has the largest audience. It follows that so many people know how to handle the aforementioned social network. In addition, the interface of this platform is convenient, pleasant and very easy to use, which is very important for any person, since it will take a minimum amount of time to master this resource. This article also raises the question of the enormous educational potential of the social network Facebook in the modernization of the educational process.

Keywords: Internet resource; Web site; foreign language; linguistic educational environment; technological barrier; Online community hierarchical barrier; information technology tool; software; psychological feature; interface; network etiquette; network security.
