ABSTRACT

We are living in a rapidly changing communication landscape. Nowadays, mobile phones send text messages, photos and voice, allow us to connect to the Internet from any location served by a wireless network; webcams provide visual contact between Internet interlocutors. All these facts are interacted with language in Web-based communication, as animation, color, and visual design. There will be one question: how do these changes affect the ways of learning, using, and teaching languages? The article examines some of the issues involved in addressing this question, identifying what we have learned so far and what we still have to understand. We focus on key issues arising from the recent technology related literature.

Keywords: Online resource, professional competence, creativity, distance learning and sociolinguistics.
