### ABSTRACT

In order to prepare to teach under the New General Education Program at primary schools in Vietnam, starting from the school year 2020-2021, surveying the capacity of teachers on building teaching plans, building school programs is extremely important, as a basis for teacher fostering at primary level. During the period of social separation due to the Covid-19 epidemic, a large-scale face-to-face survey encountered many difficulties. This article provides ways to apply information technology in conducting large-scale surveys and online survey results of primary school teachers' competencies in terms of social distancing and disease prevention Covid-19. The survey results are analyzed to help managers make plans for teacher training at primary level to prepare for the implementation of the New Program for the 2020-2021 school year in Vietnam.
