ABSTRACT

The Moodle distance learning system allows us to create our own online courses and manage site content is a good example of the use of information technology in the modern educational process. Moodle distance learning system offers us a wide range of opportunities for full support of the learning process in a distance environment - various ways of presenting educational material, checking knowledge and monitoring progress. In this article, we shall discuss of the effective use of the Moodle e-learning management system in teaching English based on our experiences.

Keywords: Moodle e-learning management system, activities, teaching English, information technology, distance learning system, language skills.
