ABSTRACT

The article purpose is to analyze the medical experience of ancient Karakalpak traditional medicine in the various human diseases treatment and their introduction into folk pedagogy, as well as training the younger generation. Ethnomedicine is the scientific medicine foundation for any nation. In ancient times, the inhabitants of Karakalpakstan were mainly engaged in animal breeding and fishing. Everyday life difficulties certainly did not leave them without injuries. Ancient traditional healers were able to painlessly heal these wounds without medicine. The healers were able to heal the fracture with stroking. The ancient Karakalpaks called such healers bonesetters.

Keywords: Ethnomedicine, bonesetters, goose-fat, fractures, mummy, koumiss, fat-tailed fat, medicinal plants.
